

Statement of Purpose

I am Khushi Manikpuri, a B.Tech. student in Information Technology at Chhattisgarh Swami Vivekanand Technical University (CSVТУ), India, with an expected graduation in 2027. I am excited to apply for the Max Planck Society Computer and Information Science Internship because I want to gain research experience and learn from leading researchers.

During my undergraduate studies, I have developed a strong interest in artificial intelligence, computer vision, and software engineering. I enjoy using technology to solve practical problems and have built projects that strengthened both my programming and problem-solving skills.

One of my key projects involved using Python and OpenCV for an AI-based computer vision application, which introduced me to image processing and intelligent systems. I also developed a Clinic Management System that improved my understanding of software development, databases, and building reliable applications.

Through this internship, I hope to deepen my knowledge of AI & Vision, improve my research skills, and collaborate with researchers working on challenging real-world problems. I believe the opportunity to work in such a research-focused environment will help me grow both academically and professionally.

Thank you for considering my application. I would be grateful for the opportunity to contribute, learn, and expand my research experience at the Max Planck Society.
